

DEHYDRATED CHERRY PULP

Product Description:

Dehydrated Cherry Pulp is obtained from high-quality dehydrated cherries that are rehydrated, thermally processed, and finely milled to achieve a smooth, uniform consistency, preserving the natural flavor, color, and aroma of the fruit while providing a stable ingredient suitable for industrial applications such as bakery fillings, confectionery, sauces, beverages, and other processed-food formulations produced under strict hygienic conditions and international food-safety standards.

Organoleptic análisis:

- Odor : Characteristic to Dehydrated Cherry
- Flavor : Sweet / Acid
- Color : Dark red, almost brown

Chemical-Nutritional Analysis:

- pH : 1.2 to 1.4
- Brix degrees : 28 to 34
- Titratable citric acidity (%) at 20°C : 4.0 to 4.5 % (expressed as malic ac.)
- Consistency (Bostwick cm/30 s) at 20°C : < 4

Microbiological Analysis:

- Mould : 10 cfu/g
- Yeasts : 10 cfu/g
- APC : 10 cfu/g

Packaging:

- . Metalic drum and aseptic high barrier bag

Conditions storage:

- Product must be stored at room temperature in a clean, dry and cool warehouse.

Shelf life:

- 24 months from production date under proper storage conditions.
