

PRUNE PULP DATA SHEET

Product Description:

Pulp derived from the centrifugation of pits obtained during the tenderization process of dehydrated prunes. This raw material is to be free from contaminants, heavy metals, and potassium sorbate.

Organoleptic análisis:

- Odor : Characteristic to prunes
- Flavor : Sweet / Acid
- Color : black-reddish to black

Chemical-Nutritional Analysis:

- pH : 3.2 to 4.0
- Brix degrees : 26 to 32
- Titratable citric acidity (%) at 20°C : 0.2 to 1.2 % (expressed as malic ac.)
- Consistency (Bostwick cm/30 s) at 20°C : < 4

Microbiological Analysis:

- Mould : 10 cfu/g
- Yeasts : 10 cfu/g
- APC : 10 cfu/g

Packaging:

- . Metalic drum and aseptic high barrier bag

Conditions storage:

- Product must be stored at room temperature in a clean, dry and cool warehouse.

Shelf life:

- 24 months from production date under proper storage conditions.
